

Brain tissue segmentation driven by multiple logistic classification algorithm (BLS)

A paper will be available as soon as possible when the current journal finishes its peer review process.

Please keep tracking the following wiki page that describes the BLS segmentation method (documentation)

<https://www.slicer.org/wiki/Documentation/Nightly/Extensions/BrainTissuesExtension>

In summary, the BLS method is an optimized application of the Logistic Classification + Image Contrast Enhancement (LS+ICE) algorithm, recently published at Medical & Biological Engineering & Computing journal (DOI:). Further details of BLS method will be addressed to a specific publication (see documentation page above).

Please, enter in contact for any doubts or questions at: acsenrafilho@usp.br
